1. Clough Park (Preferred Option)
Pros

- Links an underused grass area with the existing play provision.
- Existing playground is in poor condition and requires full replacement.
- Playground replacement funding could potentially be redirected to support the pump track, fencing and landscaping.
- Well separated from nearby housing, reducing the likelihood of noise complaints.
- Substantial on-site parking available.
- Flat site, reducing construction complexity and cost.
- Located alongside other recreational facilities, including the MUGA, creating a wider leisure offer.

Cons

- Existing playground would need to be removed and redeveloped as part of the scheme with some cost associated with removing tarmac and wetpore and putting to grass.
- Would residents complain about loss of play eqt - Butts is not far away.. Or could still include a set of swings etc?

2. Victory Park (Redundant Bowling Green)
Pros

- Centrally located within Victory Park.
- Flat site, making construction straightforward.
- Good parking provision.
- Existing toilet facilities nearby.
- Suitable size for a small pump track
- Mature trees/hedge mean the site is not completely open, which could affect visibility and sound from houses.

Cons

- Close proximity to residential properties.
- Potential concerns from residents regarding increased evening activity and noise.
- Very set size that the pump track would need to fit into

3. Victory Park (Lower Rugby Pitch)
Pros

- Fairly level site.
- Large area with ample space for a full-sized facility.

- No significant impact on neighbouring residential properties.
- Plenty of parking available from Victory or Greenberfield
- Toilet not far away

Cons

- Ground can become wet.
- New access track would need to be constructed from the road.
- Potential objections from the rugby club, which occasionally uses the area for training.

4. Greenberfield Allotment Site
Pros

- Excellent parking provision.
- Easy public access to the site.
- Good size space to be creative

Cons

- Physically separated from the main park and existing recreational facilities.
- Significant slope across the site, increasing engineering and construction costs.
- Public footpath crosses the site and would likely need diverting, creating additional cost and complexity.
- Very close to residential properties, increasing the likelihood of objections.
- Potential concerns from allotment holders regarding increased activity and anti-social behaviour.
